COMMUNICATION PLAN

Date: 15 March 2026

Team ID: SWTID-2026-5240

Project Name: EduGenie: Google Gemini Powered Learning Assistant

Maximum Marks: 1 Mark

Communication Plan:

Effective communication supports the successful development and demonstration of EduGenie, an AI-powered learning assistant built with FastAPI, HTML/CSS, Google Gemini, and a local explanation model. The plan below describes how the project team shares progress, discusses technical issues, reviews functionality, and prepares the final demonstration.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	In-person discussion / WhatsApp or Google Meet	Project team and mentor	Share daily tasks, completed work, priorities, and blockers across the AI modules, backend, and frontend.
2	Progress Update	Weekly	WhatsApp / Email / shared progress document	Project team and mentor	Report progress on Q&A, explanation, quiz, summary, learning-path modules, API integration, and UI development.
3	Issue / Bug Discussion	As Needed	WhatsApp / Google Meet / GitHub issue tracker	Relevant developer(s) and mentor	Discuss API errors, Gemini response or JSON parsing issues, model integration, and frontend/backend problems; assign actions and track resolution.
4	Stakeholder Review	Bi-Weekly	Google Meet / project demonstration	Project team, mentor, and reviewers	Review working features, gather feedback on usability and answer clarity, and agree on improvements or changes.
5	Final Demo Rehearsal	Once	Live run-through on the local web application	Project team and mentor	Test all five functions, verify the FastAPI endpoints and interface, check the demo sequence, and prepare for questions.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Coordinating work across AI modules, FastAPI endpoints, and frontend integration.	Divide work by module, share weekly progress updates, and confirm endpoint inputs/outputs before integration.
2	Handling Gemini API errors or responses that are not valid JSON, especially in quiz generation.	Discuss errors promptly, review prompts and response parsing, clean Markdown code blocks where needed, and test again with sample inputs.
3	Ensuring generated explanations, summaries, quizzes, and learning paths are clear and suitable for learners.	Demonstrate each feature during reviews, collect mentor feedback, refine prompts and interface wording, and retest before the final demo.
